DETAILED ACTION

1 This communication is in response to applicant's amendment to first non-final office action, which was filed July 12, 2006.

2 An arguments to pending claims 1-14 have been entered and made of record in the application of Patino et al., "Keypad array having reduced number of input/outputs and method for generating same" filed on September 19, 2003.

Claims 1-14 are the same as originally filed.

Claims 1-14 are pending.

Response to Arguments

3 Applicant's argument with respected to the rejected claims 1-14, filed on July 12, 2006 has been fully considered and applicant's argument is persuasive, which puts the application in a condition for allowance.

4 The following is an examiner's statement of reasons for allowance: The combined prior arts of record disclose, teach or suggest a method of generating an array having a reduced number of input/outputs, comprising the steps of for each array

row input/output, grouping at least one set of rows in which the set of rows is coupled to the array row input/output, and for each combination of the array row input/outputs.

5 However, the combined prior arts of record fails to disclose, teach or suggest a method of generating an array having a reduced number of input/outputs, comprising the steps of for each array row input/output, grouping at least one set of rows in which the set of rows is coupled to the array row input/output, and for each combination of the array row input/outputs, selectively coupling non-set rows to the array row input/outputs that comprise the combination, wherein at least a portion of a number of rows for the array is equal to the number of rows in each set of rows multiplied by the number of input/outputs coupled to the array row input/outputs plus the number of non-set rows coupled to the array input/output combinations.
